

## The PDF-Portfolio **CARIBIC\_elib\_1999-2011.pdf**

contains all reviewed papers listed on [www.caribic-atmospheric.com/publications.htm](http://www.caribic-atmospheric.com/publications.htm) with consistent, non-ambiguous file naming:

Firstautor\_YYYY.pdf - *same author, same year* -> a,b,c ...

The portfolio realization is convenient to leaf through.

### MS-Windows users:

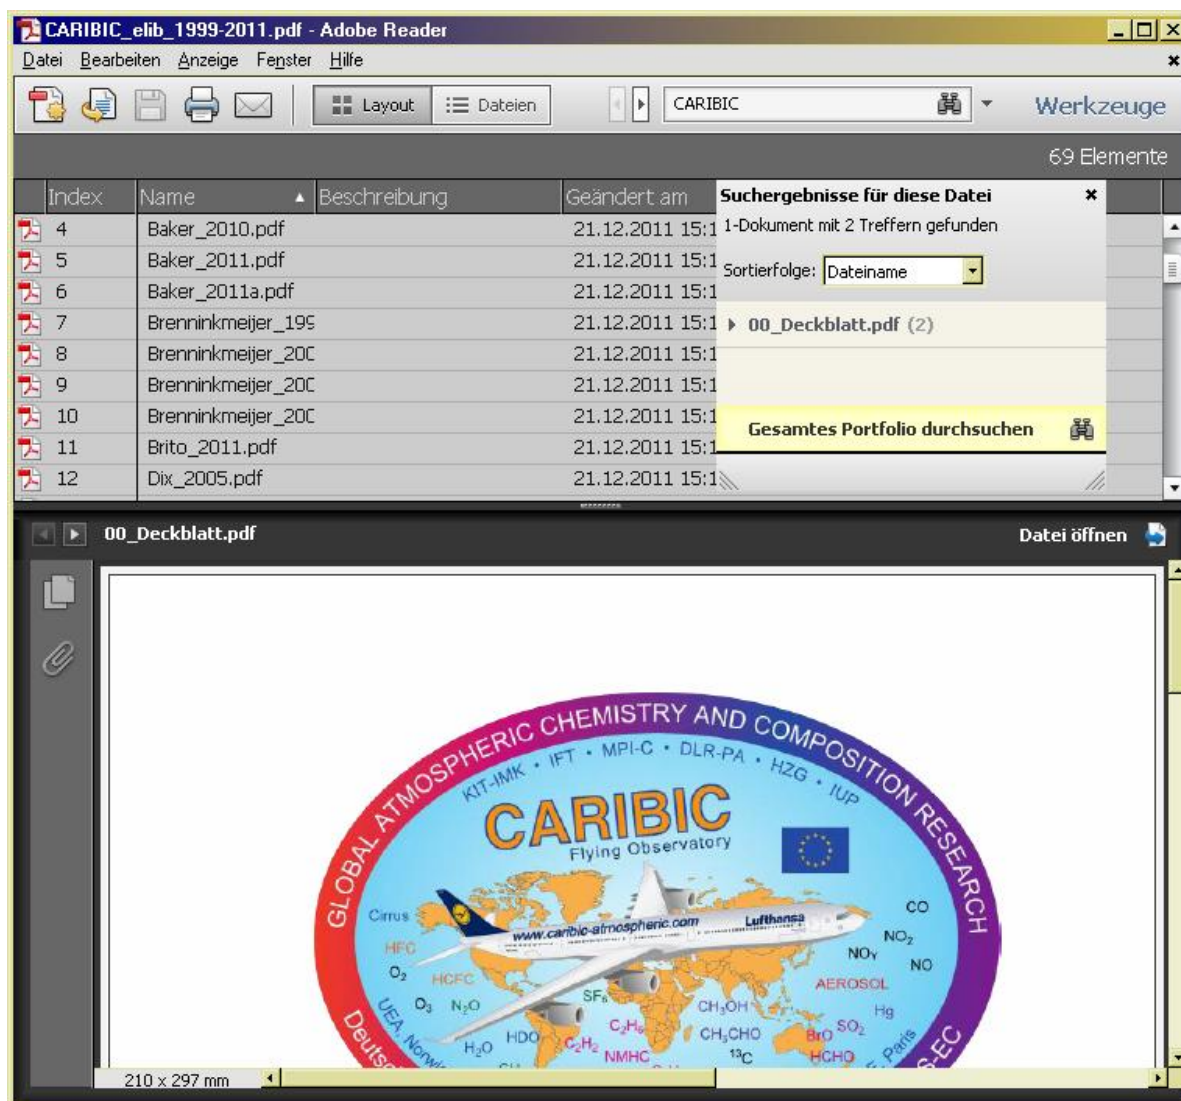

Open Portefolio with Adobe Reader - all papers will be displayed in a list and can be opened via mouse click

### Linux users:

Open portfolio with Adobe Reader v9 (at least).

At the start only the first paper (Deckblatt) will show up 🤔

To get around that bug type a string (e.g. "CARIBIC" or just "a") into the search window and click the bar at the bottom of the pull down menu ("*gesamtes Portfolio durchsuchen*" in German reader version).

After some time all papers containing the respective string are listed and ready to open.

Sorry for the inconvenience.
